

# INTERNATIONAL CONFERENCE ON BIO-BASED BUILDING MATERIALS

## Chp 1. Innovations in bio-based building materials

---

### - Natural reinforcements

Physical characterisation of hemp shiv: cell wall structure and porosity .....	22
Fibrous raw materials from an alternative supply chain for building products .....	29
The use of human hairs as a fiber-reinforcement in cement-based mortars .....	35
The compatibility between wool fibers and cementitious mortars .....	42
Use of natural fibres to enhance tensile strength of concrete .....	48
Innovative admixtures .....	54
Effect of guar gum derivatives combined with superplasticizers on properties of Portland cement-pastes .....	55
Incidence of the water-soluble compounds contained into lavender and sunflower bioaggregates on the hardening process of mineral binders .....	62
Beneficial reuse of refinery spent caustic solution in alkali-activated infrastructure materials .....	69
Effect of viscosity modifying agent on the mechanical and transport properties of hemp and rapeseed straw concrete .....	73
Effectiveness of starch ethers as rheology modifying admixture for cement based systems .....	81
Strength development of mortars using a magnesium silicate hydrate binder system under different curing conditions .....	86
Bio-based admixture for self-healing cement-based mortar .....	91
Properties of modified phosphogypsum binder .....	96
Properties of a new binder based on lime .....	103

### - Material treatments

Assessing a method of bamboo treatment and its effects on the durability and mechanical performance .....	112
Conventional and microwave-assisted thermal treatment of dendrocalamus asper bamboo .....	116
Physical and mechanical properties of rice straw treated with solution of potassium hydroxide from wood ash ..	120
Effect of linseed oil and metakaolin on the mechanical, thermal and transport properties of hemp-lime concrete .....	124
Hydrophobic sol-gel coatings on bio-based materials – influence of catalyst and solvent concentration .....	133
Effect of the use of autoclave on bio-construction materials .....	138
Earth based materials .....	142
Using alginate biopolymer to enhance the mechanical properties of earth-based materials .....	143
Mechanical enhancement of casted and compacted earth-based materials by sand, flax fiber and woven fabric of flax .....	148
An exploratory study on earthen materials stabilized by alkaline activator .....	154
Fire behavior of bio-based earth products for sustainable buildings .....	160
Mechanical and thermal performance of cob materials .....	166
Light earth performances for thermal insulation: application to earth-hemp .....	173

### - Cementitious composites

Typha bio-based aggregate mixed with natural clay to form composites: the compressive strength, the hygric performance and the fire reaction of composites are studied .....	181
Using alternative binders for the development of flax fibre reinforced mortars .....	188
Utilization of wood biomass ash (WBA) in the cement composites .....	196
Mechanical properties of hemp yarn impregnation in cementitious matrix .....	202
Compressive stress strain behavior of workable bio-concretes produced using bamboo, rice husk and wood shavings particles .....	211
Experimental investigation of cement mortar reinforced with natural fibers .....	223

### - Other innovative materials

Superabsorbent biopolymers for mitigating autogenous shrinkage in cement-based materials .....	228
Supersulfated cements based on volcanic raw materials .....	233
Lime-hemp concrete (LHC) enhancement using magnesium based binders .....	238
Calcium sulfate: an alternative for environmentally friendly construction.....	246
Projection formed and precast hemp-lime: better by design?.....	252
Development of a bio-based plasterboard.....	260
The compressive strength of mycelium derived from a mushroom production process .....	265
Utilization of mine tailings as partial cement replacement .....	272
Light-weight claydite and sawdust concrete based on supersulphated cement .....	278
Fresh and rheological properties of 3D printing bio-cement-based materials.....	283

## **Chp 2. Characterisation and modelling of the properties of bio-based building materials**

---

### **- Mechanical characterization**

Evaluation of shear strength parameters of bio-based concretes by means of triaxial compression.....	292
Straw bales for buildings: mechanical behaviour under compression .....	300
Mechanics of straw bales for building applications .....	306
Mixed-mode interfacial fracture toughness of wood and adhesives .....	314
Mechanical properties and durability of mortar with rice husk ash calcined at low temperature .....	319
Drying shrinkage and strength of GGBS and sawdust incorporated OPC mortar.....	324
Characterization of mechanical properties of hemp-clay composite.....	329
Experimental study of lateral load resistance of unclassified timber walls .....	338
Investigation on the performance and durability of treated hemp concrete with linseed oil .....	343
Synthesis and characterization of fly ash hybrid cements with limestone.....	352

### **- Acoustic properties**

Evaluating and understanding the acoustical properties of biobased materials.....	357
Acoustic properties of lime/hemp concrete produced by compression molding .....	363
Influence of liquid water on thermal and acoustical properties of hemp concretes .....	370

### **- Hygrothermal behaviour**

Experimental assessment of hygrothermal properties of clay – sunflower ( <i>Helianthus Annuus</i> ) and rape straw ( <i>Brassica Napus</i> ) bio-composites .....	376
The effect of cellulose nanocrystal (CNC) on the water permeability of early aged oil well cement .....	381
Assessment of a precast hemp concrete hygrothermal properties .....	386
Hygrothermal behaviour of a hemp concrete block, experimental and numerical results .....	394
Assessment of hygrothermal behaviour of an experimental timber-framed house .....	401
Hygric and thermal characterization of composites coupling recycled or raw bio-based materials and starch ....	409
Totora used as thermal insulation: properties and potential .....	416
Is hemp lime concrete a mix of hemp and lime?.....	422
Thermal insulation materials from renewable resources: thermal and hygric performances .....	432
Effect of water on the characteristics of polyethylene / flax fibers composites.....	440
Hygrothermal behavior of a date palm concrete .....	445
Hydrophobation of natural fibres for application in WPC materials.....	448
Extruded earth bricks: mechanical and hygrothermal properties, an anisotropic behaviour .....	452

### **- Durability**

Development of a thermocompression manufacturing process adapted to flax-epoxy laminated composites ....	458
Durability of natural fibers reinforced calcium aluminate cement matrices .....	463

Experimental study of the effect of adding fan palm fibers on concrete durability exposed to severe environments .....	468
A multi-scale analysis of hemp-based insulation materials.....	474
3D printing of fibre cement-based materials: fresh and rheological performances .....	480
Investigation on the performance and durability of treated hemp concrete with water repellent.....	489
- Life cycle assessment	
Carbon footprint of bamboo particles, rice husk and wood shavings-cement composites.....	499
Multi-objective optimization of bio-based thermal insulation materials in building modeling.....	507
Lime and hemp concrete LCA: a dynamic approach of GHG emissions and capture .....	513
- Innovative test methods	
Predicting freeze-thaw deterioration in wood-polymer composites.....	523
An assessment of the thermal storage capacity of hemp-lime using the transient performance ratio method ....	529
Correlations between pozzolanic evaluation methods, electrical conductivity and chemical shrinkage test.....	535

### **Chp 3. Applications of bio-based building materials**

---

- Valorization of domestic wastes	
Reuse of polyethylene fibres from discarded fishing nets as reinforcement in gypsym-based materials.....	545
Utilisation of cement kiln dust for the activation of fly ash in low strength applications.....	549
Multicriteria analysis of hemp particles' impact on physical and thermo-mechanical performances of hemp concrete.....	554
- Valorization of recycled minerals	
Biochar as a carbon sequestering construction material in cementitious mortar .....	563
Biochar as a bond enhancement in fiber-reinforced mortar .....	569
Innovative uses of biochar as carbon sequestering building materials in wall plaster and pellets .....	575
Preliminary investigation on use of sewage sludge ash as partly cement replacement in lightweight aggregate concrete.....	581
- Valorization of agricultural by-products	
Cementitious material with bio-based recycled agricultural waste.....	589
A review of the use of sugarcane bagasse ash with a high LOI content to produce sustainable cement composites .....	597
Elaboration and physical characterization of an agro-material based on sugar beet pulp and potato starch. ....	606
New particleboards based on agricultural byproducts: physicochemical properties with different binders .....	613
Chemical and hygrothermal characterization of agro-resources' by-product as a possible raw building material .....	620
Systemic approach to reduce energy demand and CO2 emissions of processes that transform agroforestry waste into high added value products (REHAP) .....	629
- Case studies of recycling and insulating	
Phase Change Material cement-lime mortars for thermal retrofitting of facades .....	632
Bio-based plaster for improved indoor air quality.....	637
Monitoring and thermal characterization of flax shives for building thermal insulation.....	643
Sustainable insulation of historical wooden and stone buildings with lime-hemp .....	651
Removal of dissolved and particulate contaminants from aqueous solution using natural flax fibres .....	656
Designing and building a children's bamboo & hemp playground. ....	662
Industrial scale-up of bio-based insulating panel production. ....	671
Development of bio-based insulation materials for the improvement of thermal comfort of housing in Burkina Faso .....	679
